

# PLAYWORLD™

The world needs play.

## PlayWeb

...the newest challenging rope climbing system available in three exciting sizes!

### Features

- Innovative design provides a challenging and fun climbing experience.
- Nearly 3-times the play volume as that of middle mast rope climbers of the same heights.
- Requires 50% less total space and 20% less safety surfacing area as that of middle mast rope climbers of the same heights, saving customers money and space.
- Galvanized tubular steel frame is available in 16 superdurable powder-coat colors. Cast aluminum connecting nodes are available in the same or contrasting superdurable powder-coated finish.
- Rope net is available in Red or Green 16mm wire rope covered in polyamid yarn (carpet fiber) for superior abrasion resistance and UV color-fastness. Our traditional 4-strand design provides the best grip for climbing.
- Easy to assemble and install. Using our Base Mount Kit, PlayWebs can be installed and climbed the same afternoon.
- Easy and inexpensive to maintain. If the net is damaged, individual rope sections can be replaced on-site with standard tools, unlike middle mast structures which may require replacement of entire net.
- Patented AstemTT System makes evenly tensioning the net easy for increased safety and durability. All tensioning elements are inaccessible to the users.
- PlayWebs provides the ultimate climbing experience with superior long-term value.
