

Wireless Network Site Survey
Pflugerville, Texas
2019

Overview of Sites:

- Hendrickson Tower
- Police Tower
- South Standpipe Tower
- Wilke Heatherwilde Tower
- Animal Control
- Bohl's Lift Station
- Boulder Ridge Lift Station
- Building Maintenance House
- City Hall
- Club Lift Station
- Coronado Lift Station
- Developmental Center
- Dunes Lift Station
- Eagle Point Lift Station
- Falcon Point Lift Station
- Highland Park Lift Station
- Kelly Lane Lift Station
- Lake Pump
- Library
- Littleblackhawk Lift Station
- Mud Valve 5
- Parks Department Administration
- Pfenning Pump Station
- Pfluger Crossing Lift Station
- Well Site 5
- Well Site 7
- Weiss Lane Lift Station
- Well Site 4
- Well Site 6
- Well Site 8

Scope of Work Overview

The objective of this project is to provide redundancy for city operations that utilize the current fiber network by also providing a high capacity wireless backhaul and wireless ability for the city's municipal operations such as emergency services, water/wastewater, and administration. The proposed network would allow the city to gain much more remote functionality while adding another layer of redundancy to the existing disparate fiber networks.

Each of the proposed sites was surveyed in person for required amenities that a wireless network would need to be deployed. These include:

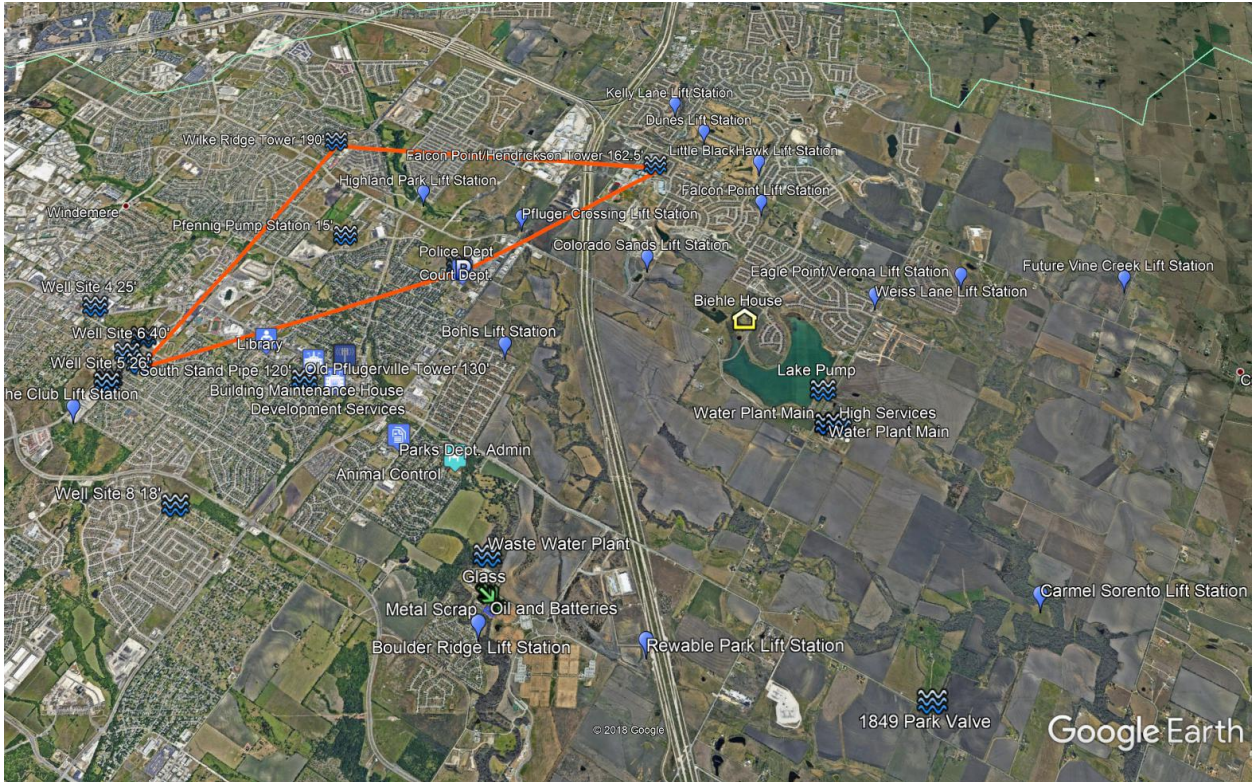

- Power: AC or DC availability on site.
- Mounting: Where a wireless node or nodes can be installed while having clear line of sight to other nodes.
- Security: Does the site have the option to be secured from public access.
- LAN Access: Does the site have local wired access to the city's core network.
- Spectrum Analysis: Identify open RF channels for use in the 2.4GHz, 4.9GHz, and 5.8GHz spectrum. (CBRS/3.xGhz was also used as a design option while not being evaluated in the spectrum analysis as the bands in question would be licensed/lite-licensed at the time of deployment)

Summary

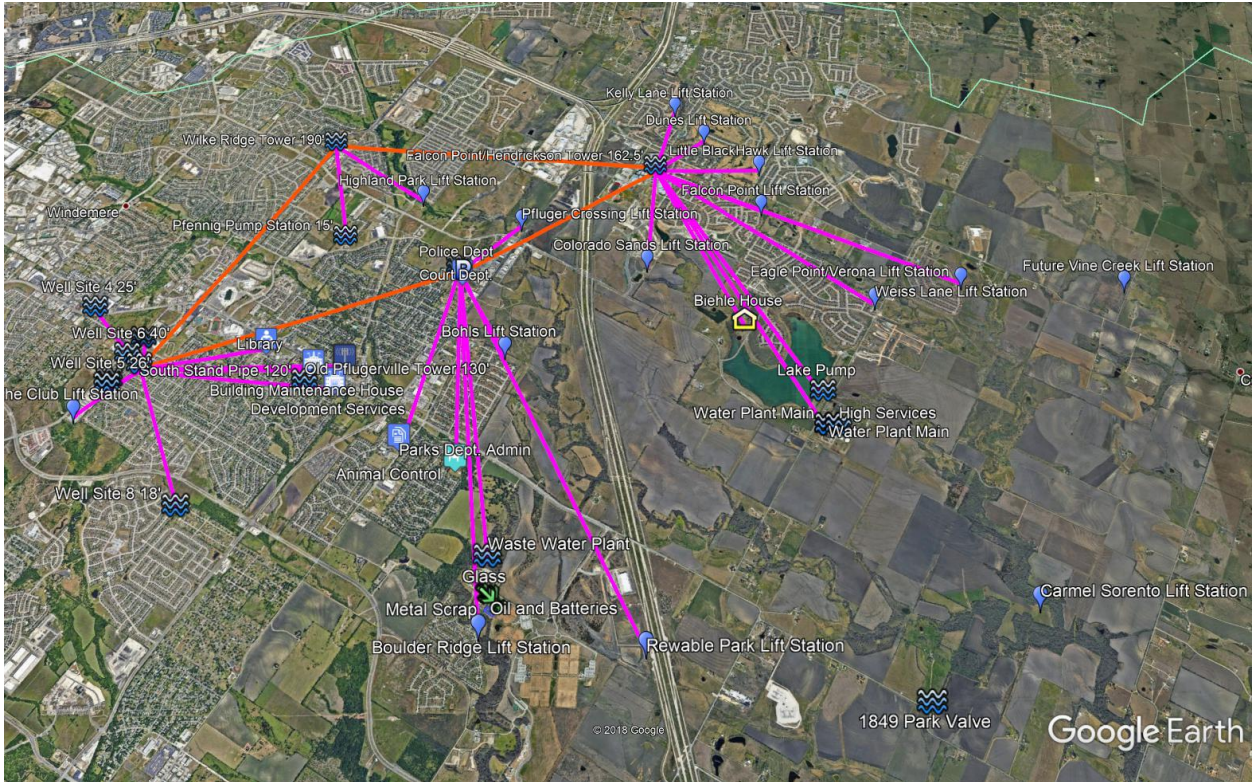

Throughout the city, 2.4GHz has been found to be used everywhere. While it could probably be used in limited capacity, it is not recommended. The UNI III band of 5.8GHz is relatively open with channel 149 and 157 found utilized at only a few sites. Channel 165 was not found to be used anywhere. 4.9GHz is known to be used by the GATORS system and was found to be used around only a few sites. 4.9GHz is reserved for public safety so approval would need to be had in order to use that spectrum. At the current planning stage, it is recommended that one 'private' band (3.x or 4.9) and one public band (5.8) be used in tandem.

All sites currently have power availability and only a few of them would need additional tower/mast deployment in order to have sufficient Line of Sight to a neighboring sites or towers. All of these details are reviewed on an individual basis in the following overview.

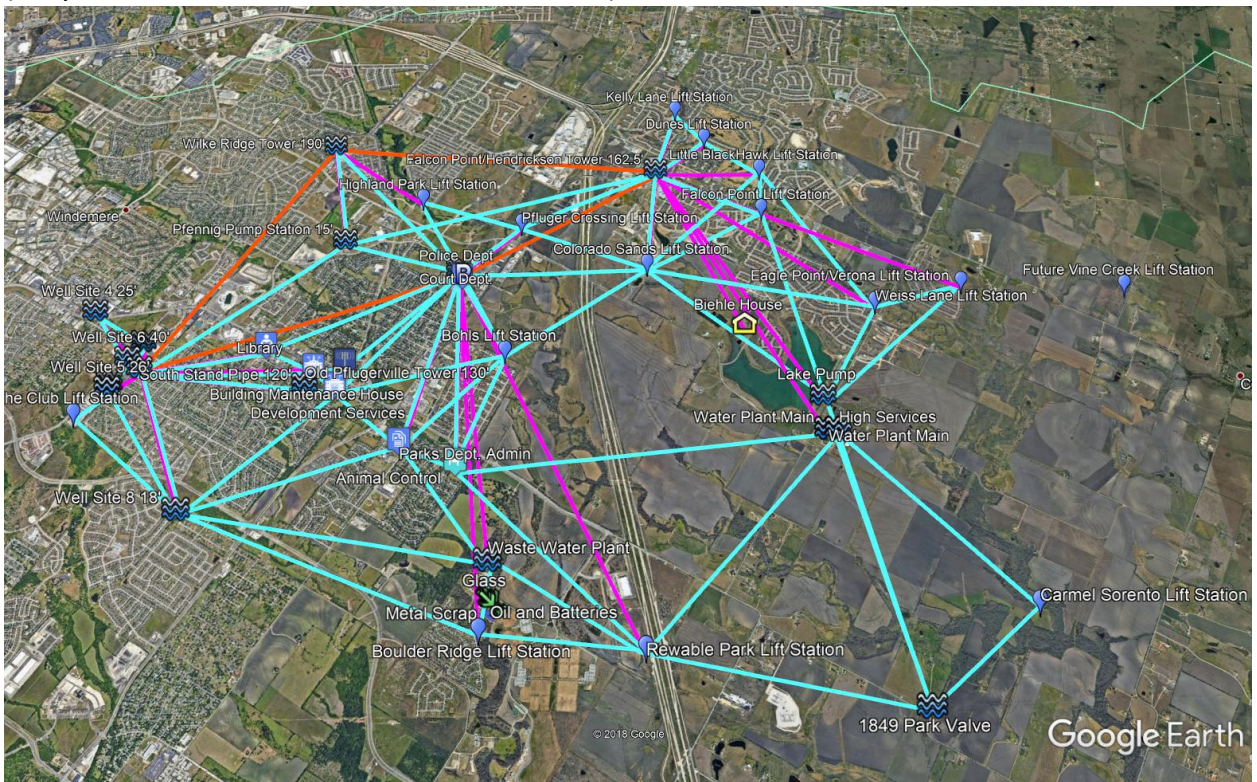

Backhaul Layout (Licensed Gigabit Capable Point to Point Core Network)

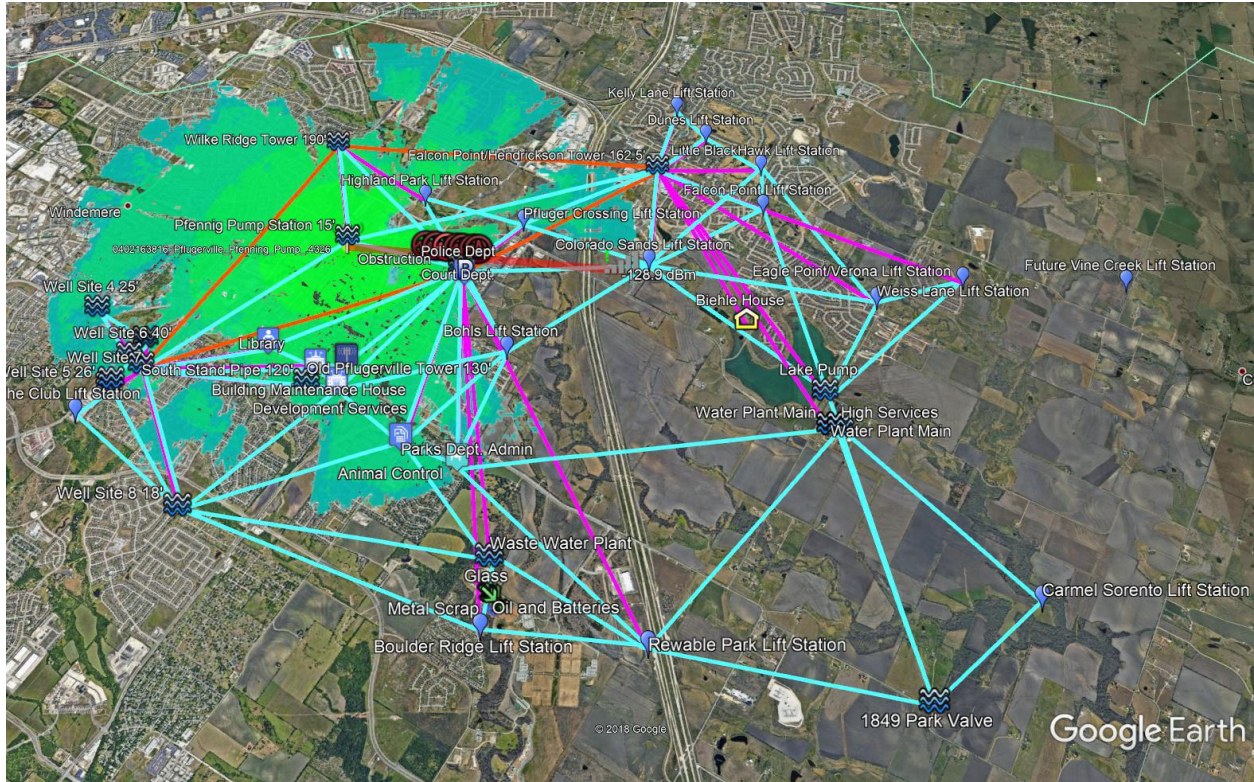

Design Option 1
(Point to Multi-Point Distribution Network)

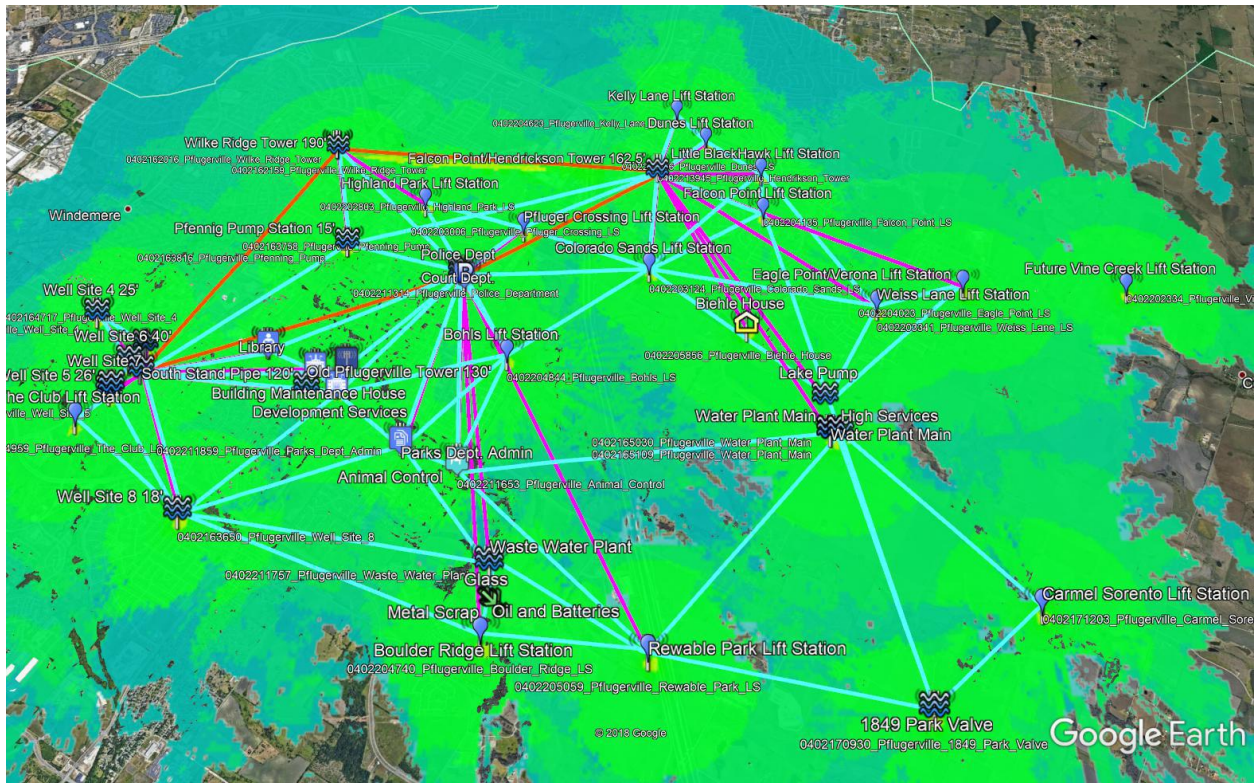

Design Option 2
(Fully Meshed Dual Band Distribution Network)

Propagation Study – Single Site Example at 5.8Ghz

Propagation Study – Complete Coverage Example at 5.8Ghz

Hendrickson Tower

Available Power	Power is available.
Mounting Option	Mounting is available on the tower.
Security	This site is secured behind a locked fence and locked door.
LAN Access	There will be fiber run to this site.
Spectrum Analysis	2.4GHz is saturated. 5GHz channel 157 is used. 4.9GHz is open.

4.99GHz

Police Tower

Available Power	Power is available.
Mounting Option	Mounting is available on the tower.
Security	This site is secured behind a locked fence and locked door.
LAN Access	There will be fiber run to this site.
Spectrum Analysis	2.4GHz is saturated. 5GHz channel 149 is used. 4.9GHz is used around 4.90GHz.
