Pflugerville City Council,

We would like to request a Variance on DG8.1A for overhead electric for our Single Family Residential Lot located at 497 East Pfluger Street

See attached Exhibit illustrating the location of the proposed overhead electric line and other existing overhead electric lines currently in the neighborhood – the location and distance from pole to pole for the proposed overhead electric was set by Oncor

Estimate of hardship

Overhead electric assumptions ~~(blue line)~~ *rw*

- \$2K in cost
- 4 - 6 weeks until electric can be brought to the property
- Two bushes removed and one tree trimmed at top

In ground electric assumptions ~~(red line)~~ *rw*

- Civil engineer will need to be hired to create plan
- Cost estimate depends on the need for boring and we know from the soil survey that limestone is 2 feet down on the 497 E Pfluger SFR lot - \$4K to \$25K in cost to bury electric line
- 2 - 4 months to get the electric line buried dependent on boring requirements
- Yards will have to be torn up and then have to be fixed after the lines are in place
